PROFESSIONAL SUMMARY

Senior Financial Analyst with 7 years of experience in quantitative financial modelling, SQL-driven reporting, and data automation at a commercial bank. Recently completed the Andrew Ng Machine Learning Specialization and applied Python-based automation to eliminate recurring reporting overhead. Seeking to transition into a Data Scientist role in FinTech, leveraging deep domain expertise in financial data alongside a growing ML foundation.

WORK EXPERIENCE

Senior Financial Analyst - Meridian Bank

Mar 2021 - Present

- Designed and maintained 15+ Excel (VBA) financial models supporting quarterly P&L reporting across a \$2.4B commercial loan portfolio
- Wrote complex SQL queries (joins, window functions, CTEs) against Oracle DB to extract, transform, and reconcile data across 8 business lines
- Automated monthly regulatory reporting package in Python (Pandas, openpyxl), cutting preparation time from 8 hours to 45 minutes
- Built a credit risk scoring model in Excel applying logistic regression principles; reduced manual loan review queue by 30%

Financial Analyst - Meridian Bank

Jun 2018 - Feb 2021

- Produced weekly performance dashboards in Tableau for senior management, tracking 20+ KPIs across retail and commercial divisions
- Maintained SQL-based data pipelines feeding the firm's monthly variance analysis reports
- Completed internal data governance certification covering data quality standards and lineage documentation

PROJECTS & SELF-DIRECTED LEARNING

Python Report Automation Tool

2022 - Present

- Built an internal CLI tool that ingests raw transaction exports, applies business rules, and outputs formatted Excel reports
- Reduced a recurring 8-hour manual task to a 45-minute automated run; adopted by 3 colleagues
- Stack: Python, Pandas, openpyxl, argparse

Machine Learning Specialization - Coursera (Andrew Ng / DeepLearning.AI)

Sep 2023 - Feb 2024

- Completed all 3 courses: Supervised ML, Advanced Learning Algorithms, Unsupervised Learning & Recommenders
- Implemented linear/logistic regression, neural networks, decision trees, k-means, and collaborative filtering from scratch in Python and NumPy
- Capstone: loan default prediction model on synthetic bank data using Scikit-learn (AUC-ROC 0.81)

EDUCATION

Georgetown University - B.S. Finance, Minor: Mathematics

Aug 2013 - May 2017

GPA: 3.61 / 4.00

SKILLS

Languages:	SQL (Oracle, PostgreSQL), Python, VBA, Bash (basic)
Python Libs:	Pandas, NumPy, Scikit-learn, openpyxl, Matplotlib
Data & Viz:	Tableau, Excel (advanced), Bloomberg Terminal, Jupyter Notebook
Finance:	Financial modelling, credit risk, DCF analysis, variance analysis, regulatory reporting
Tools:	Git, Jira, Confluence
